

Paper Sorting Systems

Removing contaminants from the paper flow can increase your paper's value from 40% - 60%, depending on the grade.

Ameri-Shred's sorting systems are custom designed to meet your specific application with options that include:

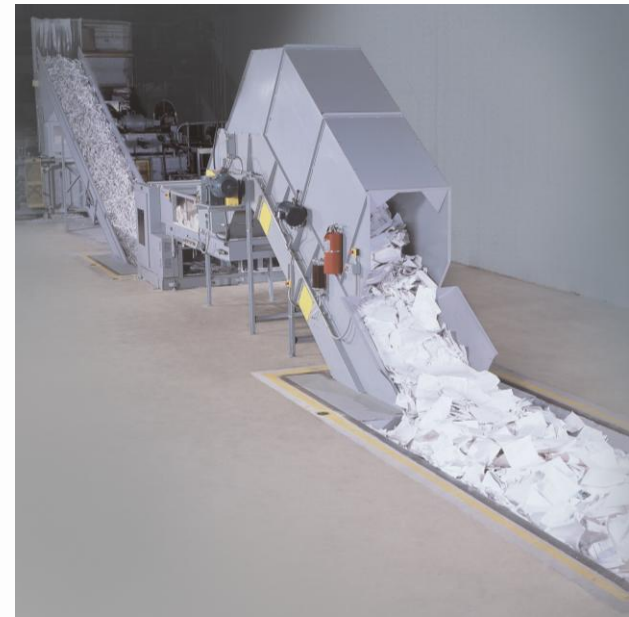

- Portable or stationary systems
- In ground with a pit or above ground with a hopper
- Various lengths & belt widths
- Variable speed with foot controls
- Mezzanine & bunker systems

Paper Metering Systems

Ameri-Shred's paper metering systems are designed to automatically feed our Series 4 and Series 5 industrial shredders but they are compatible with any high volume shredder, regardless of the manufacturer.

- Single, steel belt conveyor design with lower horizontal, incline and upper horizontal portions that eliminate paper spillage.
- Heavy duty drum style metering wheel with staggered teeth for more consistent feeding.
- Provides for bulk loading using cart tipplers, box dumpers, forklifts and Bobcats.
- Can be integrated with the shredder's control panel.
- Variable speed drive allows operator to adjust the feed rate.

PMS-2

Paper Metering Systems: Above Ground

A paper metering system maximizes production while reducing labor costs by automatically feeding the shredder at a constant rate. They allow one operator to do the work of two or three.

- Motor: 3.0 horsepower TEFC
- Belt speed: 12.5 - 50 fpm variable
- Hopper capacity: 500 - 1,000 lbs.
- Hopper is accessible from 3 sides
- Side Skirts: 24" High
- Metering drum: fixed speed
- Weight: 8,500 lbs.

PMS-3

Paper Metering Systems: In-Ground

A paper metering system maximizes production while reducing labor costs by automatically feeding the shredder at a constant rate. They allow one operator to do the work of two or three.

- Motor: 7.5 horsepower TEFC
- Belt speed: 12.5 - 50 fpm variable
- Live load capacity: 3,000 lbs.
- Pit is accessible from 3 sides
- Side Skirts: 24" High
- Metering drum: fixed speed
- Pit frame & flashing optional
